

MEASLES CASES, 1989-1991

The following two figures -- figures 16 and 17 -- show the relationship between vaccination coverage and measles incidence in various cities and the age distribution of measles cases during the 1989-1991 U.S. measles epidemics.

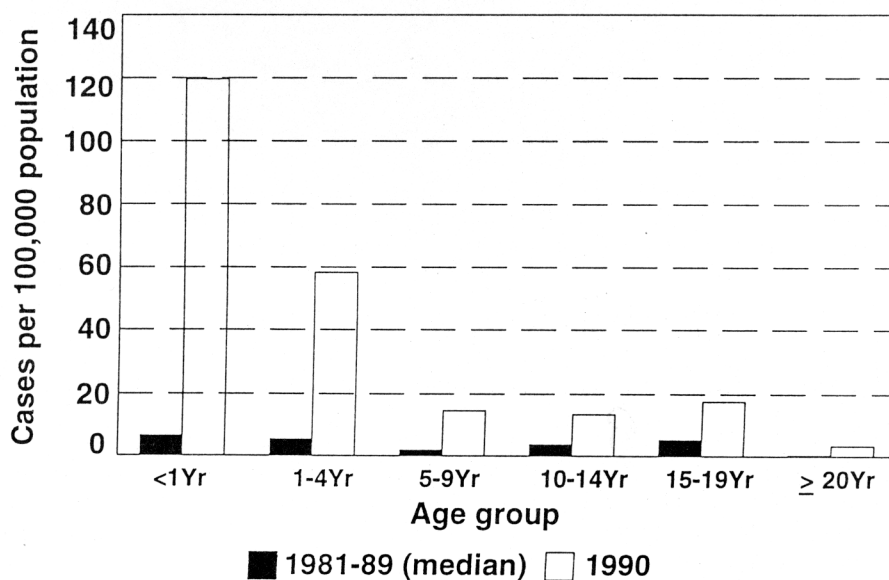

Figure 16: Measles vaccine coverage at 24 months of age and mean measles incidence in selected cities, 1980-1989

*based on retrospective survey of first grade students in innercity public schools
